

# Color Staff Gauge

- Five colors for easier identification
- High visibility
- Full surface reflection
- Easy-to-read scale
- Rust proof

● **Five colors for easier identification**

Misreading eliminated in a long distance by installing boards with scaled that stand in the water with different colors at a 1m interval.

● **High visibility**

Colors with high visibility allow easy recognition in the day/night, bad weather, and a far distance.

● **Full surface reflection**

The retroreflective surface material allows easier reading during the night with bright board with scaled standing in the water as most of the light reflects in the direction of the light source, regardless of the incident direction.

● **Easy-to-read scale**

Easy reading of the water level with a 1cm scale and 2cm scale arranged side by side.

● **Rust proof**

Rust-proof design with the aluminum or stainless steel material.

■ **Standard specifications**

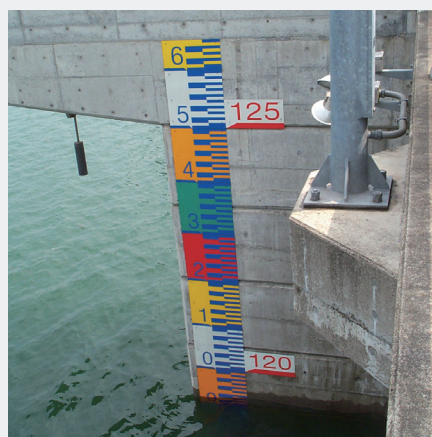

- Length:1000mm
- Width:120mm
- Thickness:2mm
- Material:Aluminum or Stainless
- Color:White, Yellow, Red, Green, Orange

■ **Customized specifications**

- For slope –  
Example: 63°slope, 45°slope, 34°slope
  - For Dam(Wide-range type) –  
Example: Width 300mm, 500mm, 1000mm
  - For CCTV –  
Example: Color for highly sensitive camera
- ※Available upon request as slope, width, thickness, design and so on

Example: Staff Gauge for River

Example: Staff Gauge for Dam
